

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in the application:

**LISTING OF CLAIMS:**

1. (currently amended): A user's request reflecting design system for timely and accurately reflecting users' requests on a product, comprising:
  - design data publicizing means for publicizing design data to users through a computer network;
  - correction data receiving means for receiving and storing correction data as said design data corrected by a user through said computer network; and
  - design assisting means for reflecting said correction data received by said correction data receiving means on product design,
    - wherein said design data publicizing means includes
      - public design data prepared in advance to be publicized among said design data,
      - an editing program file for editing said public design data, and
      - a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal, and
    - wherein said correction data receiving means includes
      - a data base for registering said correction data, and

a received ~~mail~~ submission processing unit for receiving an electronic submission ~~mail~~  
associated with a specific user to which said correction data and additional personal information  
of the specific user is attached and registering and storing said correction data in said data base,

said received ~~mail~~ submission processing unit classifying said attached correction data  
based on ~~an attribute of the user~~ the additional personal information of the specific user recited in  
said received electronic ~~mail~~ submission and registering said correction data in said data base  
based on the classification results.

2. (original): The user's request reflecting design system as set forth in claim 1, wherein  
said design data is three-dimensional data.

3. (canceled).

4. (previously presented): The user's request reflecting design system as set forth in  
claim 1, wherein said editing program file enables editing of three-dimensional data.

5.-8. (canceled).

9. (currently amended): A user's request reflecting design system for timely and  
accurately reflecting users' requests on a product, comprising:

design data publicizing means for publicizing design data to users through a computer network;

correction data receiving means for receiving and storing correction data as said design data corrected by a user through said computer network; and

design assisting means for reflecting said correction data received by said correction data receiving means on product design,

wherein said design data publicizing means includes

public design data prepared in advance to be publicized among said design data,

an editing program file for editing said public design data, and

a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal, and

~~wherein said design data publicizing processing unit includes~~wherein the terminal includes

an information entry selecting means allowing a user to select either, enter design information without downloading public design data, entry in the form of a menu or request transfer of said public design data from the design data publicizing processing unit to the user together with and an editing program file.

10. (currently amended): The user's request reflecting design system as set forth in claim 1, wherein

said correction data receiving means further includes

a data base for registering said correction data, and

a received mail-submission processing unit for receiving an electronic mail-submission to which said correction data is attached and registering and storing said correction data in said data base, and

in creation of said design data by said design assisting means, said correction data registered in said data base is used.

11. (currently amended): A user's request reflecting design method of timely and accurately reflecting users' requests on a product, comprising the steps of:

publicizing design data to users through a computer network;

receiving correction data as said design data corrected by a user through said computer network; and

reflecting said correction data received on product design,

wherein said design data publicizing step includes the step of

in response to a request from a terminal connected to said computer network, transferring public design data prepared in advance to be publicized among said design data and an editing program file for editing said public design data to said terminal, and

wherein said correction data receiving step including the steps of  
receiving an electronic ~~mail~~ submission associated with a specific user to which said  
correction data and additional personal information of the specific user is attached, and  
classifying said attached correction data ~~attached~~ based on the additional personal  
information of the specific user recited in said received electronic submission and registering  
said correction data in a data base based on the classification results. ~~personal information of a~~  
~~user recited in said electronic mail.~~

12.-16. (canceled).

17. (currently amended): A server of a user's request reflecting design system for  
timely and accurately reflecting users' requests on a product, comprising:

design data publicizing means for publicizing design data to users through a computer  
network; and

correction data receiving means for receiving correction data as said design data  
corrected by a user through said computer network and storing said correction data so as to be  
usable by design assisting means for reflecting said correction data on product design,

wherein said design data publicizing means includes

public design data prepared in advance to be publicized among said design data,

an editing program file for editing said public design data, and

a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal; and

wherein said correction data receiving means includes

a data base for registering said correction data, and

a received ~~mail~~ submission processing unit for receiving an electronic ~~mail~~ submission associated with a specific user to which said correction data is attached and registering and storing said correction data in said data base,

said received ~~mail~~ submission processing unit classifying said attached correction data ~~attached based on said additional personal information of the specific user recited in the received electronic submission~~ and registering said correction data in said data base based on the classification results ~~on personal information of a user recited in said electronic mail~~.

18.-22. (canceled).

23. (currently amended): A server of a user's request reflecting design system for timely and accurately reflecting users' requests on a product, comprising:

design data publicizing means for publicizing design data to users through a computer network; and

correction data receiving means for receiving correction data as said design data corrected by a user through said computer network and storing said correction data so as to be usable by design assisting means for reflecting said correction data on product design,

wherein said design data publicizing means includes

public design data prepared in advance to be publicized among said design data,

an editing program file for editing said public design data; and

a design data publicizing processing unit responsive to a request from a terminal connected to said computer network for transferring said public design data and said editing program file to said terminal,

~~wherein said design data publicizing processing unit includes~~wherein the terminal includes

an information entry selecting means allowing a user to select either, enter design information without downloading public design data, entry in the form of a menu or request transfer of said public design data from the design data publicizing processing unit to the user together with and an editing program file.

24.-26. (canceled).

27. (currently amended): The user's request reflecting design system as set forth in claim 1, wherein said ~~attributes~~additional personal information of the specific user matches categories, wherein said categories are common to a group of users.

28. (currently amended): The user's request reflecting design system as set forth in claim ~~27~~, wherein said correction data is classified according to at least two ~~attributes~~categories.

29. (currently amended): The user's request reflecting design method as set forth in claim 11, wherein said additional personal information of the specific user matches categories, wherein said categories are common to a group of users.

30. (new): The user's request reflecting design method as set forth in claim 11, further comprising the step of searching the correction data based upon classified additional personal information.

31. (new): The server of a user's request reflecting design system as set forth in claim 17, wherein said additional personal information of the specific user matches categories, wherein said categories are common to a group of users.

32. (new): The user's request reflecting system as set forth in claim 1, wherein the electronic submission is electronic mail.

33. (new): The user's request reflecting design method as set forth in claim 11, wherein the electronic submission is electronic mail.

34. (new): The server of a user's request reflecting design system as set forth in claim 17, wherein the electronic submission is electronic mail.

35. (new): The user's request reflecting system as set forth in claim 1, wherein the additional personal information of the specific user is age, sex and residence of the specific user.

36. (new): The user's request reflecting system as set forth in claim 11, wherein the personal information of the specific user is age, sex and residence of the specific user.

37. (new): The user's request reflecting system as set forth in claim 17, wherein the personal information of the specific user is age, sex and residence of the specific user.
